

Metal Working Make-Up Systems

HydroMinder Fluid Proportioner

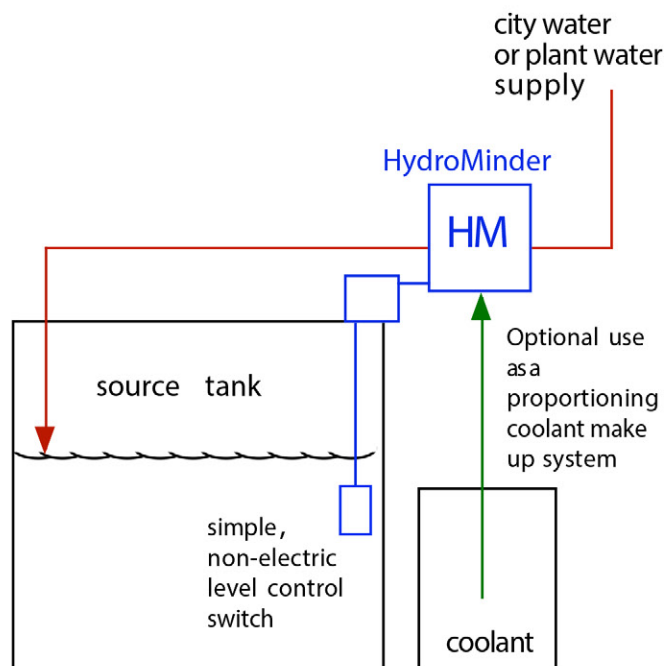

Features and Benefits

- HydroMinder units use water power, no electricity required
- Built with high quality, chemically resistant materials
- Economical, easy to operate and maintain
- Better chemical performance—consistent automatic dilution delivers maximum performance
- Time and labor savings—eliminates the need for manually handling, measuring and mixing concentrated chemicals
- Improved employee safety – eliminates exposure to concentrated product
- Environmentally friendly – using concentrates reduce solid waste

Venturi type fluid proportioner and level control system

Hydrominders can be used as coolant proportioners or simply as a fluid level control device when fluids need to be added to a tank. When the level in the reservoir drops, the float opens a non-electric, magnetic valve and the HydroMinder replenishes the supply of solution in the tank. When the level reaches the preset fill level, the HydroMinder automatically shuts off. Various interchangeable metering tips to regulate the concentration are available.
